**I. General description and use**

Hammer conversion circle HCC-2135 is designed to reduce the discus throwing circle inside diameter from 2500 mm to 2135 mm, which is needed for hammer throw. The elements are put inside the discus throwing circle.

**II. Technical specification**

Code	HCC-2135
Outer dia. [mm]	2500
Inside dia. [mm]	2135
Conversion circle type	competition, certified
Construction	made of steel, galvanized and powder coated in white, assembled by means of single-head feather key
Standard circle element (A)	3 pieces
Circle element with handle (B)	1 piece
Weight [kg]	45

[mm]

### III. Operation and maintenance

To assemble the conversion circle:

a.) place one of the standard circle elements (A) inside the discus throwing circle,

b.) slide the feather key of the next element into the socket of the first element at a sharp angle,

c.) then while pulling it out a little lower slowly the element to the ground,

d.) do the same with the remaining standard element(A),

e.) the element with the cut-out handle (B) is to be attached as the last one.

f.) the disassembly is done in the same way but in the reverse sequence, so using the cut-out handle pull out the element (B) first.

During idle periods, the conversion circle should be stored in a dry roofed place.

For the duration of the summer athletics season, the conversion circle may be installed in the throwing circle provided that a special cover is used to protect the circles against water and dirt, PC16-S0512 (available separately) see below.

#### IV. Packing and transport

The conversion circle is packed in foil and sent on a pallet.
